U-Net forecast
c Flow matching: forecast + noise → draws
x_0
forecast + $\sigma\varepsilon$
x_t
repeated 32 times
$x_t \leftarrow x_t + \hat{v}\,\delta$
velocity network $\hat{v}$
c: the ten input fields
draw A, x_1
draw B, x_1
draw C, x_1
distribution of the possible outcomes
broad
sharp
one forecast, three draws
